Patient's Name: Mr. XXXXXXX XXX

Referred by: Dr. X XXXXXXXXX

Date Taken: 2/7/16

Date of Report: 2/7/16

Patient's Complaint: Non-productive cough and malaise.

Patient's History: Non-contributory.

Findings:

Radiographic examination of the chest by means of PA and lateral projections reveals ill-defined consolidation within the medial aspect of the right middle lobe (Boyden segment #5) obliterating the right cardiac margin (positive silhouette sign). The tracheal silhouette is midline and the lungfields appear well-pneumatized without atelectasis.

The cardiac silhouette is of normal size and configuration. The visualized rib margins are unremarkable.

Impressions:

1. Right middle lobe consolidation compatible with acute pneumonitis. Referral for sputum culture and medical co-management is strongly recommended. Serial chest radiography is suggested until resolution.

G.A. Longmuir, DC, DACBR
